ABOUT ME

Aspiring Electronics and Communication Engineering student passionate about robotics, embedded systems, IoT, PCB design, and artificial intelligence. Enjoys transforming ideas into practical hardware and software solutions through hands-on projects, with a goal of building intelligent robotic systems that solve real-world problems while continuously learning emerging technologies.

CORE SKILLS

Languages: C, C++, Python

Hardware & Embedded: Arduino & ESP32 Development, Embedded Systems & IoT, PCB Design (KiCad)

Tools & Platforms: Wokwi & Tinkercad Simulation, Windows & Basic Linux

FEATURED PROJECTS

Moon Rover

Designed a prototype rover for rough-terrain exploration using embedded electronics and motor control.

DeepTrck — [deeptrck.vercel.app](#)

Created a productivity platform to help users organize tasks and stay focused.

Arduino & ESP32 IoT Projects

Built cloud-connected IoT applications using ESP32, Wi-Fi, and ThingSpeak.

WhatsApp Chatbot

Developed an automated chatbot to streamline customer communication for businesses.

EXPERIENCE & CERTIFICATIONS

- Entry-Level Robotics, IoT & AI Internship — Pray Labs, Tiruvannamalai
- PCB Designing Training-cum-Internship — PCI
- Coursera: Basic Robotics
- Udemy: Basic Arduino

VISION

To become a Robotics Engineer specializing in autonomous systems, embedded electronics, and AI-driven robotics — contributing to innovative technologies that create real-world impact.
